Para mostrar todas las cartas para la implementación HashMap, lo que toma tiempo es el for que eso tomo 15 ms, y luego el print de las cartas dentro del for que es el que tomó más tiempo siendo 62ms.

```
for (String key : cartas.keySet())
{
    System.out.println("Nombre: " + key + " | Tipo: " + cartas.get(key));
}
for (String key : coleccionUsuario.keySet())
{
    System.out.println("Nombre: " + key + " | Tipo: " + coleccionUsuario.get(key));
}
```
